## Abstract

Reiki Masters claim that the use of crystals during hand (energy) healing enhances the healing. Could crystals influence the body? Crystals crystalize under the ground at very high temperature and pressure, which slowly drop down. If so, the crystalline structure could be expected to incorporate some of this energy, but the effect of crystals' energy of the human electromagnetic field (EMF) can be expected to be subtle. However, considering the fact that the human EMF, which rules and regulates everything in the body, is a subtle field thousands of times weaker than the body biocurrents, we decided to try to measure the effect of crystals on it. Reiki Healers and their patients were measured with our sensitive patented energy meter. The patients were first hand-healed without crystals and then with crystals. It was found that when crystals were used the energy balance was better. To avoid the argument that maybe the healing with crystal was better because it was a second Reiki healing, we also measured patients treated first with Reiki healing with crystals and then without crystals. In both cases, the energy balance of the body was better after the use of crystals, which proves that crystals do facilitate the energy (Reiki) healing.

**Keywords:** Reiki healing; Energy healing; Hand healing; Reiki healing with crystals; Measured effect of crystals

**Abbreviations:** EMF: Electromagnetic Field.

## Introduction

I couldn't find any measurements of the subtle effect of crystals on the subtle nonlinear EMF of the human body. Such measurements were missing because they would require a non-invasive equipment with high sensitivity, which could measure the subtle effect of crystals on the body without using additional voltage impute that would

perturb the system and make the results unreliable. We built, patented, and used such equipment.

## Method

Our patented sensitive equipment was used to measure the effect of crystals on the human EMF during Reiki healing (patent #08/966,727). The measuring system consisted of: measuring electronic equipment with one reference electrode held in the left hand of the measured individual and certain number of specially designed measuring electrodes placed on the measured points

(special paste was used to improve the contact). The system also included a system analyzer and computer. The measurements were done before and after each Reiki healing and both healers and patients were measured.

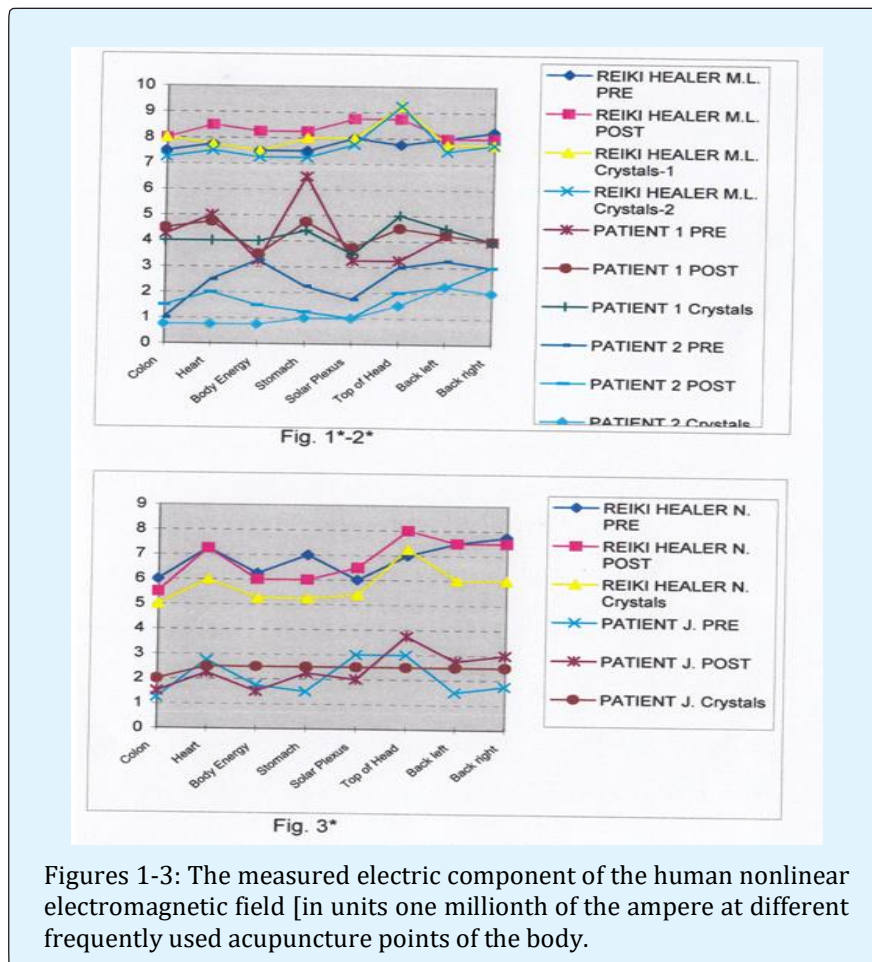

Computer software explained at which points the energy must be measured: where to measure the functional energy of the heart (HT7), the solar plexus (CT12), the stomach (ST36), the colon (SI4), the body energy (TE6), the bladder (BL24 measured at the right and left sides of the backbone), and the point of energy union on top of the head Bai Hwei (GV20). These were the most frequently used acupuncture points, which provide adequate information about the state of health or disease of the internal organs and the body as a whole [1].

Another article would report the set of measurements along the backbone. We were monitoring the balance or imbalance of the backbone vertebrae by monitoring the neurons exiting between them, which innervate the extremities and the internal organs.

## Results

The results reflecting the measurements of Reiki Healers and their patients (with or without the use of crystals) are graphically presented below on Figures 1-3. They show that the patients treated with crystals seemed to be better balanced energetically, which means they were healthier. It was not a placebo effect because the patients were not expecting any special effect.

First, Reiki healers and their patients were measured before and after Reiki healing (without crystals). Then we measured them after Reiki healing with crystals. To avoid the argument that maybe the healing with crystal was better because it was a second Reiki healing, measurement were also done in reverse order. After the second Reiki treatment, which was without crystals, the energy balance seemed to be worse regardless of the fact that it was a second Reiki treatment. Both sets of measurements show that the energy balance of the body was better when crystals were used during the Reiki healing [2].

Figures 1-3: The measured electric component of the human nonlinear electromagnetic field [in units one millionth of the ampere at different frequently used acupuncture points of the body.

The graphics on Figures 1-3, provide evidence that the use of crystals on patients during Reiki healing really enhances the healing effect on the patient. The energy of the patients was closer to a straight line when crystals were used, which means they were better balanced energetically or healthier. There was also a visible effect on the healer observed as an increase of the energy measured on the top of their heads.

Our previous measurements showed that the claim of the Reiki Healers that they use Universal energy to heal is right [3]. Our electric measurements showed increased energy on the top of the Reiki Healers' heads, which can also be seen on Figures 1-3. This means that the Reiki Healers suck electric energy from the atmosphere through the top of their head, where the top opening of their donut-shaped EMF is (Figure 4). Then the sucked energy is channeled through the hands of the Reiki Healer to the patient.

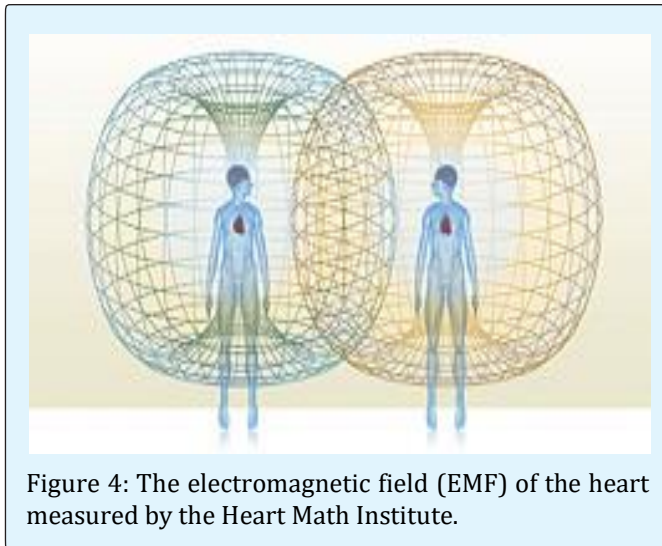

Figure 4: The electromagnetic field (EMF) of the heart measured by the Heart Math Institute.

To reveal the involvement of the Solar Plexus in the process of channeling energy to the patient during Reiki healing, measurements were done with one hand on the Solar Plexus, while the other was used to heal. No healing energy was measured: blocking the Solar Plexus blocked the flux of healing energy. However, if one of the hands was healing, while the other was hanging down parallel to the body, transfer of healing energy to the patient was measured. This proves that during Reiki healing the Universal energy, which the healer sucks, is channeled to the hands of the Reiki Healers through the Solar Plexus.

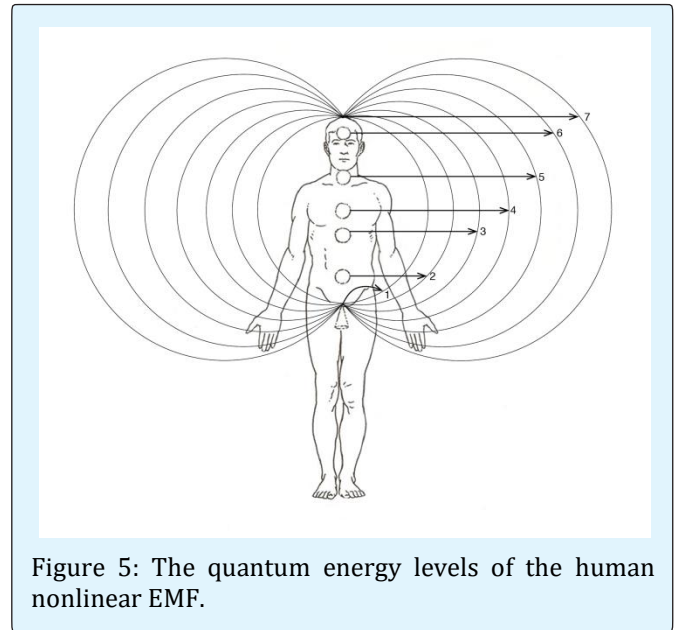

Figure 5: The quantum energy levels of the human nonlinear EMF.

The human EMF is nonlinear and has a chain of 6 alternating vortices and anti-vortices along the backbone, which is the axis of rotation of the donut. I can measure these vortices with my sensitive energy meter. The vortices are numbered from the tailbone toward the head and represented by concentric donuts with increasing radiuses (quantum energy levels) and the same axis of rotation (Figure 5) [4].

The torus of the heart presented on Figure 4 is the torus of vortex # 4 on Figure 5 (It is called the heart vortex). As seen on Figure 5, the seventh vortex on top of the head integrates the energies of all the vortices lying under it because all their corresponding quantum energy donuts meet on the top of the head, which is one of the poles of the vertical magnet induced from the spinning of the donut-shaped EMF [5-6].

When crystals or emotional excitement increases the energy of the human nonlinear EMF, the whole donut-shaped nonlinear EMF starts to spin faster and more electric energy from the atmosphere is sucked through the top of the head [5-6].

## Discussion and Conclusions

Some Reiki healers use quartz crystals during Reiki healing and claim that crystals facilitate the healing.

To prove or disprove their statement, we decided to measure with our patented high sensitivity energy meter. Our measurements showed that after Reiki healing done with crystals the energy balance of the patient was better, which meant that the patient was healthier.

Human beings are to some extent living liquid crystals and no wonder crystals influence them. The amount of water in our body is so high that if it was not in capillaries, where it is crystalized, we will be liquid bullions [7]. The amount of water is 95% in fetuses, 90% in babies, 70% between age 20 and 30, 50% between age 40 and 50, and 30% between age 70 and 80. The decrease of water content is what causes the appearance of wrinkles and makes the bones brittle in advanced age [8].

In another article, we will measure and discuss the effect of different color crystals on the human energy balance. Different impurities in the quartz crystals color them with different colors. The impurity electron levels are close to the top of the forbidden for the electrons zone. The transfer of electrons from these impurity electron levels to the nearby valence zone, where the electrons are allowed to be, is in the visual part of the spectrum. In this way, different impurities cause emissions with different colors of the visual spectrum.

Since the system of acupuncture meridians is color sensitive, crystals with different impurities, which have different colors, are expected to have different effect on different organs and thus to cure different diseases [1]. For example, manganese impurities make the quartz crystals purple and such crystals are called amethyst. Reiki healers claim that amethyst's crystals disperse blood clots when applied to blood vessels with

thrombosis and if so could and should be used in cases of thrombophlebitis.

### Acknowledgement

The author acknowledges the organizing skill of Reiki Master Mary Lou Kuneman and expresses gratitude for her help in organizing the measurements.
