## Abstract

**Introduction:** We are facing another kind of immunodeficiency caused by a different mechanism of HIV and the use of some medications such as corticosteroids and immunosuppresses. This article will show that the human being is affected by energy deficiency inside the five internal massive organs (Liver, Heart, Spleen, Lungs and Kidneys) caused by the chronic exposition to electromagnetic radiation after the implementation of cell phones, computers and 4G and 5G technology. It will be shown as to which are the clinical characteristics presented by these women patients that are suffering from this energy deficiency situation (because energy alterations are the main cause of manifestation of many different clinical presentations), and what we need to do to treat this condition accordingly.

**Keywords:** Immunodeficiency; Energy Deficiency; Traditional Chinese Medicine; Homeopathy; Hippocrates

## Introduction

The development of medicine is not keeping up with the changes generated by the process of modernization of the world [1]. Or rather, medicine has already been highly evolved since antiquity, but the norms of what modern medicine is have changed and older kinds of medicine began to have no effect on clinical reasoning in both diagnosis and treatment today [2,3]. The author says this because medicine is following the rules imposed with the implementation of the Flexner report in 1910, where only the materialized part of the human being would be considered "scientific" for the medical community, failing to study the other portion that corresponds to the energy segment of the human being, which is that representation of the human body not visible to the naked eye [4,5]. With the process of modernization of media and communication and the implementation of 5G electromagnetic waves across the globe and the use of cell phones and computers, there has been a change in this energy

pattern within the human being in a way that has not been noticed by modern medicine but has been observed by herself, in her clinical practice in Brazil [6,7].

The objective of this article is to demonstrate what women are presenting these days when they have this condition of immunodeficiency caused by a lack of energy in the five massive internal organs to make it easier for doctors who treat their patients today to make the diagnosis correctly, and know that behind those symptoms, there may be a deeper cause at the energy level, which today's professionals are not yet diagnosing. Medical schools still maintain the same curriculum of teaching which focuses on the material and fails to understand what happens before diseases is formed at the energy level [8,9]. Energy is what makes up our universe was said by the most famous physicist in our world, the renowned scientist Albert Einstein (1879-1955) [10].

In the author research (2021) studying 1000 patients' energy levels of their five internal massive organs (Liver, Heart, Spleen, Lungs and Kidneys) considering the five elements theory of Traditional Chinese Medicine, she concluded that 90% of these patients were at the lowest level of energy, rated one out of eight. This study was done from 2015 to April 2020 before the COVID-19 pandemic, and if we analyze the energy today, in 2024, 100% of them would be at the lowest level of energy [11,12]. The clinical characteristics presented by women in this *New Global Immunodeficiency* will be described in the next paragraphs.

Regarding the emotional factors, many of them would feel depression symptoms and many of them are using anti-depressant medication to treat these symptoms. In this case, the use of anti-depressant medication would reduce even more their internal energy, which is already very low and would worsen the patient's condition instead of improving it [13]. Many of them would have symptoms of anxiety associated or not with depression manifestations, and the use of psychotropic medication in this case would reduce even more this lack of energy of the five internal massive organs energy, and would worsen the patients' condition instead of improving it [13,14]. It is very common to see panic syndrome in these patients, and it is very common to see symptoms of palpitation and death sensations and feelings of fear in many different situations [15].

Many of them may be experiencing burnout syndrome as they lack the energy necessary to overcome difficulties at work, whether emotional or physical. But the changes in this syndrome are not caused by stress at work but rather due to the energy changes they already had before, triggering a snowball process. The use of anti-depressants in this situation has further reduced the energy deficiency and can cause stagnation or worsening of their clinical condition, as it would not be treating the cause and only the symptoms presented by the patients [16]. They can also present obesity caused by this lack of energy inside the five internal massive organs leading to strong constipation, and reduced urinary stream, feelings of fatigue, laziness to get out of bed and to do physical exercise, as well as the desire to eat a lot and the feeling that it does not satisfy their appetite [17].

There is the desire to drink Cold water to try to reduce thirst as internal Heat is formed due to energy deficiency, but the use of Cold water generates even more dry mouth, turning into a snowball effect [18-20]. It is very common to see constipation due to a lack of energy to eliminate feces, and not due to a lack of dietary fiber intake. Patients may have a history of going up to 20 days without having a bowel movement [21]. Patients may have abdominal pain which indicates the formation of internal Heat due to energy deficiency without a cause detectable by 4 complementary

tests, with all tests apparently normal. Only the rebalancing and energy replacement treatment would bring one's life back to normal, without this abdominal pain [22]. Patients may complain of difficulty swallowing and gastro esophageal reflux, or epigastria burning that does not improve with the use of proton pump-based medications. Patients who undergo reflux surgery may not improve their symptoms after surgery because the underlying cause that caused the reflux has not yet been corrected [23].

Certain patients may have complaints compatible with ulcerative colitis and Chron, and commonly use medications to de-inflate the intestine, sometimes using corticosteroids or other immunosuppressants, however, due to the amount of medication that is generally prescribed, they experience a lot of fatigue and side effects due to the lowering of their energy that these medications can cause [24,25]. Another very common symptom in these patients is having insomnia with difficulty sleeping, waking up several times at night, making sleep unrefreshing. Many of them may have dark circles under their eyes (Kidney energy deficiency) or redder circles around the eyes (Liver energy deficiency) [26,27]. Another very common complaint is headache, which can be holocranian or just parts of the head. They generally do not improve completely with the use of the medication usually used for headaches' treatment. Only therapy with the energy replacement of these five massive internal organs using highly diluted medication according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine* can treat the cause of lack of energy in the five internal massive organs [5-28].

Each area of the cranium represents each internal hollow organ that is coupled to each internal five massive organs, and the treatment of one organ representing the affected area needs to treat the entire system because they are all interconnected by the energy flow [28]. They can have convulsions mainly in the period when they lose blood. The loss of blood can generate more energy deficiency causing the formation of internal Fire leading to the formation of internal Wind generating convulsions [29]. They can have any type of tumor in the central nervous system, be it benign or malignant in nature, but have a basic cause that led to the formation of this lack of energy in these five massive internal organs. It is imperative to treat all cases based on their underlying cause and not just perform surgery, and then not treat this lack of energy, as it can lead to a recurrence of the condition or even the death of the patient [30].

They can have the most varied ocular manifestations such as glaucoma, conjunctival hyperemia, myopia, keratoconus, diabetic retinopathy, choroidal vasculopathy, etc. and the underlying cause of all ocular manifestations comes from this lack of energy in the five massive internal

organs in Traditional Chinese Medicine [12,32-34]. It is very common for patients to complain of tinnitus or dizziness, which is caused by an energy level, and commonly used medication does not improve the symptoms presented, as they further reduce the lack of energy in these five massive internal organs [35]. The patient may develop pruritus in the external ear with local hyperemia, and it be confused with otitis externa caused by bacteria. The use of antibiotics in this situation can generate more hyperemia as it causes an even greater reduction in the lack of energy, generating more internal Heat formation, worsening the condition instead of improving it [36]. Patients may experience hearing difficulties also caused by a lack of energy in the Kidney, which is the massive internal organ of traditional Chinese medicine responsible for hearing [20,37].

It is very common for patients to have their menstrual periods altered with the loss of a lot of blood and this does not improve with the use of female hormones normally used in these cases. Only energy replacement therapy can cause the normalization of the menstrual cycle as this change does not have a hormonal cause but an energetic one, leading to confusion in the diagnosis and treatment of the condition [27,38]. Patients may have fibroids found in laboratory tests or experience bleeding and are often advised that the fibroids are the cause of the bleeding. However, analyzing the energy level, both the formation of fibroids and the formation of bleeding changes in the menstrual cycle are caused by a lack of energy in the five massive internal organs and treating the cause of the formation of the two diseases can avoid removing the patient's uterus as we have seen in clinical practice, as it is not treating the cause and only removing the symptom generated by an energy deficiency [27,38].

It is more common to see young patients complaining that they are experiencing symptoms of early menopause with changes in the menstrual cycle, loss of libido, hair loss, hot flashes and vaginal dryness [27,39]. Any type of gynecological tumor, whether in the breast or uterus or ovaries, is imperatively caused by the lack of energy in the five massive internal organs, and the means used to treat these pathologies today, in which only the affected area is treated and not the systemic cause which has generated it, has caused many complications, as most treatments for these tumors involve the use of highly concentrated medications such as chemotherapy and radiotherapy and the use of these medications in patients known to be energy deficient can generate multiply complications such as depression, hair loss, loss of appetite, extreme fatigue, thrombosis, etc. or even the death of the patient [27,40,41]. One of the clinical signs that patients are without energy is to see the presence of small spider veins on the leg or even in other organs such as the face and chest, indicating in this case that there is not enough energy for blood circulation to occur in the

microcirculation. And the use of cauterization methods used in common treatments ends up not improving because the underlying cause is not being treated. Which is the lack of energy in these five massive internal organs [42].

As any use of highly concentrated medication today can cause serious side effects such as thrombosis, myocardial infarction, stroke, diabetes, cancer, etc., it is imperative that we discover the use of medication to prevent pregnancy in women where it is not necessary to use these hormonal pills, as their use can cause an even greater reduction in energy, which is already low, and cause the complications mentioned above or even the death of the patient [43-45]. It is very common to see patients with frequent cases of renal colic due to the formation of stones in the urinary tract but due to the low energy of these five internal massive organs [46,47]. Generally, obstruction is treated by undoing the stones, but the underlying cause that caused it is never treated, which is the lack of Kidney energy, but because each organ is dependent on the energy of the organ that transmits energy to it, all organs are interconnected and not working independently. This is contrary to the point of view of today's modern medicine [46].

The cause of most cases of urinary tract infections is this lack of energy in the five massive internal organs, generating the formation of internal Heat that is housed in the bladder [48]. The use of antimicrobials in this situation may temporarily resolve the symptoms or no solve in many cases, but this condition will recur as the factor that caused it has not yet been treated, which is the lack of energy in the five internal massive organs with the formation of internal Heat [48]. All bacterial, viral or other microorganism infectious conditions have in common, this lack of energy in the five internal massive organs leading to the formation of internal Heat and leading to hyperemia in the skin or surgical scar, yellowing of lung secretion, etc. and treating these energy changes, it is possible to treat these infections without using antibiotics or antivirals because the underlying condition that generated these symptoms was the lack of energy in the five internal massive organs, with subsequent formation of internal Heat, responsible for the manifestations of infection at a clinical level [49,50]. Therefore, all patients who have COVID-19 have a lack of energy in the five internal massive organs, causing a loss of *Zheng-Qi*, which is the energy of the Kidney, responsible for protecting the body against the invasion of external pathogenic factors, such as this virus [51,52].

The use of vaccines to prevent this virus will not prevent the manifestation of this infection, as we are seeing nowadays, that despite mass vaccination, many people are getting this infection, some having to be hospitalized, and some having to be treated in an intensive care unit, as the underlying

cause of immunodeficiency was not treated to combat this infection [51,52]. The use of the COVID-19 vaccine in this immunodeficient population causes an even greater reduction in internal energy, causing a worsening of the immune system, increasing the propensity of having cancer in patients who have not yet had this pathology before the vaccine or having a propensity to have metastases in patients with cancer who took the vaccine, as it causes greater immunosuppression, due to an even greater reduction in our energy [53,54]. Female patients who took the vaccine may have an even greater change in menstrual flow when they received the COVID-19 vaccine, increasing the flow, and it often does not improve when using hormonal medications or even sometimes worsens the patient's condition. The reason for this is that the use of hormones in this situation causes an even greater reduction in the patient's energy and creates more internal Heat, responsible for altered menstrual bleeding [20-38].

Patients have more difficulty getting pregnant because the energy for reproduction is in the Kidney, which is lacking energy in most patients nowadays. Treatment with "in vitro" fertilization is not yet treating the cause of infertility at an energy level and if you manage to get pregnant through this route, the fetuses can be born with low energy and have problems such as autism, attention deficit syndrome, psychomotor agitation, insomnia, etc [47-55]. They are usually tired and without libido for sexual activities, as sexuality is the responsibility of the Kidney, which is without energy in most of the patients studied [48].

Even in lesbian patients, this low libido is occurring and treatment by replenishing the energy of these five massive internal organs can improve libido and improve sexual desire and performance [56]. Patients typically have a greater tendency to have type 1, type 2 and gestational diabetes. This condition of hyperglycemia is caused by energy changes in these five internal massive organs and the formation of internal Heat, generating a condition of hyperglycemia. Most patients with any type of diabetes are based on this change in energy and it is imperative to treat these changes and not just the symptoms using hypoglycemic medications or insulin, as both cause internal energy to drop even further, causing greater Heat formation internally, generating hyperglycemia [57,58].

The prevention of the formation of gestational diabetes in these patients is to carry out a treatment to replace these energies before conception, associated with the treatment of the husband or sexual partner, as this treatment of the lack of energy can prevent diseases during pregnancy and postpartum, prevent diseases in childhood and in the life of the new being that is being generated [58]. Any type of cancer generated in these patients is based on a lack of energy in the

five internal massive organs and the formation of internal Heat. Treating these deficiencies and removing internal Heat has the power to cure patients with any type of cancer, as the underlying cause has been treated. What happens nowadays is that only the symptoms that we see with the naked eye are treated, however the energy imbalances that caused this disease are almost never treated, generating complications or even death for these patients [30].

As we are in a period of immunosuppression, where the patients' immune system is lowered due to the lack of energy in the five massive internal organs, measures to implement more frequent clinical examinations must be carried out, such as palpation of the breasts in a correct way. We must evaluate whether the use of other means currently used to carry out prevention, such as mammograms, could be further reducing patients' energy, and whether they could further increase the risk of getting cancer after carrying out the proposed exam [8,40,41]. I say this because patients who took the COVID-19 prevention vaccine were more likely to have cancer after this vaccination, even though they had regular gynecological preventive exams and even so, there are reports saying that patient were diagnosed with breast cancer 4 months after having a normal mammogram [53]. The appearance of malignant tumors is also confusing radiologists because at the same time that they could just be myoma, now these changes on ultrasound are actually malignant cancer of the uterus, which even with several pap smear tests, can come out with a negative result for cancer, when it is actually a difficult cancer to diagnose [59]. The changes found in female patients can be countless, but through this short article, the author come to report her clinical experiences in her daily work here in Brazil.

The treatment of this immunological change due to a lack of energy in the five massive internal organs can be treated using homeopathic medicines created by Samuel Hahnemann (1755-1843), but through the new theory written by herself when she started taking the homeopathy course in Brazil in 2015 titled *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine*. It was created to be used by any person nowadays to give energy for their proper functioning and for their life [5]. In this new theory, she applied the teachings of traditional Chinese medicine but instead of using Chinese medicine in the treatment, she chose to use Western medicine easily found in her country where she works, which is Brazil. This way, she can replenish the energy of the Liver using *Phosphorus*, replenish the energy of the Heart using *Sulphur*, replenish the energy of the Spleen using *Calcarea carbonica*, replenish the energy of the Lung using *Silicea*, replenish the energy of the Kidneys using *Natrum muriaticum*. They need to be used for the entire life of patients in any kind of pathology except for the acute phase of infectious diseases [5].

The conclusion of this study is to demonstrate that all symptoms presented by women patients in this new global immunodeficiency are related to the lack of energy inside the five internal massive organs according to the five elements theory of traditional Chinese medicine. The treatment of this condition, replenishing the energy of these organs using highly diluted medications according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine* is of paramount importance to treat the cause of the formation of most diseases. The use of highly concentrated medications can reduce even more the internal energy and cause complications or even the death of the patient.
