Abstract

Modern life vogue and bound environmental exposures have resulted in male infertility. The activating factors turn out differing types of derangements that directly or indirectly cause sexual dysfunctions. Male impotence conjointly known as erectile dysfunction (ED) may be a common medical condition that affects the sexual lifetime of ample men worldwide. ED is outlined because the inability of a person to realize and maintain an erection adequate for naturally satisfactory intercourse. This literary criticism discusses regarding aphrodisiac potential of plants, its biological science name, Common name, family, parts used and chemical constituents, that are useful for investigator to development new aphrodisiac formulations. Hence, patients are seeking complementary and practice of medicine to treat sexual dysfunction. Ayurveda and different Indian literature mention the utilization of plants in numerous human ailments. India has regarding over 45000 plant species and among them many thousand are claimed to possess medicative properties.

Keywords: Sildenafil; Ayurveda; India; Chemistry; Aphrodite; Fabaceae

Abbreviations: WHO: World Health Organization; ED: Erectile Dysfunction; NO: Nitric Oxide; ML: Mount Latency; IL: Intromission Latency; EL: Ejaculation Latency; MF: Mounting Frequency; IF: Intromission Frequency; PEI: Post-Ejaculatory Interval; Pgs: Phosphodiesterase; FSH: Follicle Stimulating Hormone.
Introduction

Aphrodisiac is that the word derived from Aphrodite, the Greek god of sexual, love and sweetness. Associate aphrodisiac is outlined as an agent (food or drug) that arouses physical attraction or sexual desire [1]. The chance of bioactive aphrodisiacs which can be derived from plants, animals or minerals, has been engaging throughout recorded history [2]. Aphrodisiac are mentioned there as Vajikaranas, the word vaji that means horse and karanta meaning creating i.e. Live to excite lust by charms etc. Natural products are on the market in texts of Ayurveda for their spermatogenic and virility potential activities. Ayurvedic aphrodisiac medical specialty is classified into vajikarana (pharmacological) and rasayana (non-pharmacological products) [3]. The plant-based, ancient or traditional medicine systems still play an important role in health care, with regarding 80% of the world’s inhabitants relying in the main on ancient medicines for his or her primary health care. Modern pharmacopeia still contains a minimum of 25% drugs derived from plants and plenty of others that are artificial or synthetic analogues, designed on model compounds isolated from plants. Medicinal herbal plants produce bioactive compounds used in the main for medicinal functions [4-6]. Some well-known herbal aphrodisiacs are genus Allium sativum, Alpinia galangal, Anacardium occidentale, Anacyclus pyrethrum, Butea frondosa, Caesalpinia benthamiana, Cannabis sativa, Chlorophyllum borivilianum, Citrullus lanatus, Eurycoma longifolia, Ginkgo biloba, Hibiscus sabdariffa, etc. Sexual relationships are some of the foremost necessary social and biological relationship in human life. According to World Health Organization (WHO) Sexual health is prime to the physical or emotional health and wellbeing of people, couples and families and to the social or economic development of communities and countries [7,8]. The National Institutes of Health Consensus Development Conference on Impotence (7 December 1992) has outlined, Male impotence conjointly known as ED may be a common medical condition that affects the sexual life of millions of men worldwide. Impotency or ED as the ‘inability to realize and maintain a penial erection adequate for satisfactory sexual relationship’ (Figure 1) [9]. ED is outlined because the persistent inability to get associated maintains an erection comfortable for naturally satisfactory intercourse. Male reproductive capability was found to be deficient in nearly 50% of infertile couples in step with a study carried by the WHO. Sexual disfunction may be a serious medical and social symptom that happens in 10-52% of men and 25-63% of women [10-12]. Sexual desire is controlled and regulated by the central central nervous system that integrates tactile, olfactive and mental stimuli (Figure 2) [13].

<td>Some aphrodisiac merely provides a burst of nutritional worth rising the immediate health or well-being of the patron and consequently improving sexual performance and concupiscence (libido).</td>
</tr>
<tr>
<td>2</td>
<td>Second</td>
<td>This cluster includes the supposed aphrodisiac have a lot of specific physiological affects however don't seem to be psychologically active. They will have an effect on blood flow; increase duration of sexual intercourse by desensitizing the sex organ space [14,15].</td>
</tr>
<tr>
<td>3</td>
<td>Third</td>
<td>The third cluster of aphrodisiac is created up compounds that are psychopharmacological, i.e. they really cross the blood brain barriers and stimulates some space of arousal [16]. This class includes a wide range of neurotransmitters, hormones, pheromones and drugs that interfere with the traditional perform of those molecules [17]. This class is most tough to check as a result of information of each arousal and therefore the mechanisms of the psychoactive properties of drugs are restricted. Solely the foremost general data regarding arousal and therefore the brain is known [18].</td>

Side Effects of Allopathic Treatments Used in Sexual Dysfunction

Side effects include drowsiness, insomnia, nasal congestion, headaches, dizziness, tachycardia, weight loss, etc. (Figure 3) [19].
### Some Medicinal Plants with Aphrodisiac Potential

Some of the traditional plants have tested to possess a conventional similarly as scientifically proven aphrodisiac which will enhance passion, increase physical attraction, enhance sexual performance and facilitate to extend the intensity of sexual love [20]. A short report of aphrodisiac plants in (Table 2) [21-26].

### Butea frondosa (Papilionaceae)

**Flame of the forest, bastard teak**

The extract (400 mg/kg body wt./day) was administered orally by gavage for 28 days. Mount latency (ML), intromission latency (IL), ejaculation latency (EL), mounting frequency (MF), intromission frequency (IF), ejaculation frequency (EF) & post-ejaculatory interval (PEI) were the parameters observed before and during the sexual behaviour study at day 0, 7, 10, 14, 21, & 28. The extract reduced significantly ML, IL, EL and PEI (p < 0.05). The extract also increased significantly MF, IF and EF (p < 0.05). These effects were observed in sexually active and inactive male rats.

| | Pharmacology of the testicular effects of sub chronic administration of *H. sabdariffa* calyx aqueous extract in rats has been determined. Doses of 1.15, 2.30, & 4.60g/kg for 12 weeks showed in significant change in the absolute & relative testicular weights; significant decrease in the epididymal sperm count & induced testicular toxicity | Several compounds have been isolated from different parts of *H. sabdariffa* including β-carotene, vitamin C, riboflavin, thiamine, and nutrients such as protein, carbohydrates & minerals like calcium and iron. *H. sabdariffa* is composed chiefly of organic acids, anthocyanins, polysaccharides & flavonoids. Spectroscopic analysis off the aqueous extract of *H. sabdariffa* have yielded citric acids, hydroxycitric acid, hibiscus acid, malic acid & tartaric acids; oxalic acid as minor compounds. Delphinidin & cyanidin based anthocyanins including delphinidin-3-
| **Lepidium meyenii** (Cruciferae) | Peruvian ginseng, maca | In a research, treatment of rats with maca at high altitudes prevented high altitude spermatogenic disruption. In a separate study, 1500 mg/kg or 3000 mg/kg orally showed no significant effect on serum levels of leutinizing & follicle stimulating hormone (FSH) | Maca improves stamina & endurance, mood, & libido & erectile capabilities due to the presence of arginine which boosts NO which relaxes blood vessels, the same basic effect Viagra produces | Macamides such as benzyglucosinolate, benzyloscyanate, benzyl nitrile, benzyl alcohol, benzylaldehyde, benzylamine, hexanal, linoleic acid, N-benzylhexadecanamide, alkaloids, fatty acids, amino acids |

| **Mimosa tenuiflora** (Fabaceae) | Jurema preta, calumbi | A research into the spermatic characteristics of *M. tenuiflora* on ram showed no significant differences (P>0.05) for the progressive motility, spermatic strength & morphology among the sheep with or without *M. tenuiflora*. The result indicated that *M. tenuiflora* does not influence negatively on spermatic characteristics of the sheep | Two alkaloids have been isolated from *M tenuiflora* & includes 5-hydroxy-typtamine and N,N-dimethyltyptamine. *M tenuiflora* is also composed of yuremanine and two chalcones; kukulkan A (2′,4′-dihydroxy-3′,4′-dihydroxychalcone), kukulkan B (2′,4′,6′-trihydroxy-3′-methoxychalcone). *M tenuiflora* is also composed of the steroids campesterol-3-O-β-D-glucopyranosyl, stigmasterol-3-O-β-D-glucopyranosyl and 3-O-β-D-glucopyranosyl. Saponins such as mimonoside A, mimonoside B, mimonoside C have been isolated. Five 2-phenoxycromones ("uncommon" flavonoids), the tenuiflorin A [5,7-dihydroxy-2-(3-hydroxy-4-methoxyphenoxy)-6-methoxychromone], tenuiflorin B [5,7-dihydroxy-2-(4-hydroxy-3-methoxyphenoxy)-6-methoxychromone] & tenuiflorin C & 6-demethoxy-4′-O-methylcapillarisin were isolated from the leaves of *M. tenuiflora* | Alkaloids, steroids, & flavonoids |

saambubioside (Hibiscin), cyanidin-3,5-diglucoside, delphinidin, etc. have been reported.
### Mucuna pruriens (Fabaceae)

- **Velvet beans, lyon bean**
- In different texts of Ayurveda, *M. pruriens* is most commonly used in aphrodisiac formulations. At 70 mg/kg, treatments significantly improved testosterone quality, ameliorated Psychological stress & improved sperm count.
- Producing a dose dependent increase in FSH & leutenizing hormone which increases the number of eggs released at ovulation by the action of L-DOPA & dopamine.
- **L-DOPA, serotonin, mucunain, arachidic acid, behenic acid, genistein, glutamic acids, betacarboline, β-sitosterol, cysteine, dopamine, lysine, tryptamine, riboflavin**
- Alkaloids, amino acids, saponins, & vitamins

### Musa (Musa paradisiacal/ sapientum) (Musaceae)

- **Banana, plantain**
- Aqueous extract of *M. paradisiaca* root on testicular function parameters on male rats at 25, 50 and 100 mg/kg enhanced the testosterone dependent normal functioning of the testes. *M. sapientum* contain bromine, norepinephrine, dopamine & serotonin in the peel & pulp. Norepinephrine & dopamine elevate blood pressure while serotonin stimulates the blood vessels of the intestine.
- **Increase in blood Circulation**
- Bromine, rubidium, strontium, saponins, norepinephrine, dopamine, serotonin, vitamin B6, vitamin a, c and D and natural glucose, fructose. Several compounds such as acyl steryl glycoside such a sitoindoside-I, sitoindoside-II, sitoindoside-III, sitoindoside-IV and steryl glycosides such as sitosterol, *myo-inosityl*-β-D-glucoside have been isolated from fruits of *M. paradisiaca*, A bicyclic diarylheptanoid, rel-(3S, 4aR,10bR)-8-hydroxy-3-(4-hydroxyphenyl)-9-methoxy-4a,5,6,10b-tetrahydro-3H-naphthol[2,1-b] pyran, and 1,2-dihydro-1,2,3trihydroxy-9-(4-hydroxyphenyl) naphthalic anhydride, 1,7-bis(4-hydroxyphenyl) hepta-4(E), 6(E)-dien-3-one have also been isolated, cyclomusalenol, cyclomusalenone.
- Saponins, alkaloids, vitamins, glycosides, triterpenes, & sterols

### Myristica fragrans (Myristiaceae)

- **Nutmeg, mace**
- 50% ethanolic extract showed significant increase in aphrodisiac properties in mice such as increase in mating frequency, libido & potency. It has also been used in Unani medicine for the treatment of sexual disorders.
- **Stimulation of the nervous system by myristicin**
- A-pinene, camphene, p-cymene, sabinene, β-phllandiene, γ-terpinene, limonene, myrcene, linalool, 3-methyl-4-decan-1-ol, fixed oils like myristic, stearic, palmitic, oleic and olenolic acids, Licarin B & malabaricone C.
- Essential oils, fixed oils, & unsaturated aliphatic hydrocarbon

### Ocimum gratissimum (Lamiaceae)

- **Ocimum, wild basil**
- Oral administration of extracts of *O. gratissimum* at 100, 250 & 500 mg/kg to 6 groups of male rats once a day for seven days showed significant.
- **O. gratissimum** consist of several essential oils such as thymol, eugenol, methyl charvical, gratissimol, pentoses, hexoses, uronic acid, alkaloids, tannins.
- Volatile oils, alkaloids, & tannins
increase in mounting frequency, intromission frequency, erection & aggregate penile reflexes

Ginseng berry

Panax extract standardized with gensenoside Rg3 significantly produced significant & sustains increase in sexual activity of normal male rats. Improvement in all forms of sexual dysfunction including erectile dysfunction & premature ejaculation

Ginsenosides enhances acetylcholine-induced & transmural nerve stimulation-activated relaxation associated with increasing tissue cGMP mediated by the release of NO

Panax ginseng (Araliaceae)

Passionflower, wild passion vine

The aphrodisiac effect of the methanolic extract of P. incarnate has been determined in mice. The result showed significant aphrodisiac properties in male mice at all doses- 75, 100 & 150 mg/kg with 100 mg/kg having the highest activity

Several compounds such as flavonoids and other phenolics have been isolated from P. incarnate such as apigenin and luteolin, isovitexin, vitexin, isoorientin, orientin & saponarin. Also isolated from P. incarnate includes schaftoside, isoschaftoside, isovitexin-2′-O-β-glucoside & isoorientin-2-O-β-glucoside

Passiflora incarnata (Passifloraceae)

Table 2: Medicinal Plants used for the improvement of sexual performance and virility.

**Conclusion**

Herbals medicinal plants have a possible to treat the assorted varieties of body ailments. The demand of herbal medicine is increasing day by day in developed yet as developing countries as a result of they are safer and well tolerated as compared to those of allopathic drugs. These plants must be subjected to animal and human studies to figure out their effectiveness in whole organism systems. Many plants have tried helpful within the management of sexual disorders throughout history, even herbs and spices are accustomed increased sexual activities in varied components of the world. There’s great would like for substances that are accustomed treat sexual dysfunction in humans. The utilization of aphrodisiacs is outstanding in several countries of the world as well as Asian country like India, China, Sri Lanka, and Pakistan.
