Opinion

a) To Reach a Level of Understanding with the Teamwork
This understanding is reached by

- Taking care of your team members , accepting their weakness and make use of their strength
- Being trust worthy by being aware of your specialty and up to date as much as you can Saying only facts in medicine, no more any less.

b) Relation with other department colleagues, if there is heart feeling or hatred as you are the only GP in charge of his department (dialysis unit) this will be reflected as complains from them to the administration on every action not understood to them.

c) Relation with the administration

This is gained by practicing and taking feedback about your work whether you are doing well or not , and are work on knowledge or just by try and error

d) Feed back of your work at higher administration That's gained by correct unexplained decisions above your restrictions where complains are reported about you

e) Strength of the effect of families of the patients against doctors' orders

f) Managing to prescribe a suitable ttt for the patient that can avoid clashes with anyone without altering the patients ttt
