### Editorial

Since 2010, I have been measuring the energy of all my human patients and at that time, the majority of them have energy in the five internal massive organs of the five elements of traditional Chinese medicine theory. They corresponds to Wood, Fire, Earth, Metal and Water and each of this elements corresponds to one internal massive organs such as Liver, Heart, Spleen, Lungs, and Kidney respectively [1].

If we analyse throughout the point of view of Hippocrates (c. 460 bce - c. 375 bce), the father of medicine, he said in one of his oath that "we need to consider other ancient medical traditions prior to the knowledge we have nowadays". If we analyse from the point of view of traditional Chinese medicine (TCM), that exists for more than 5 thousands years, these organs are important to production of internal energy of *Yin, Yang, Qi*, and Blood, important to our survival and represents to cornerstone of the majority of treatment in all kinds of diseases according to TCM [2,3].

In animal, these information's are also important and they can also be used for the treatment of them [4]. One interesting case of a human patient that went to my clinic due to back pain, said that her cat had diabetes and was uncontrolled even using insulin and the glycemia was more than 500 mg/dl [4].

I asked to bring her cat to measure the energy of the five internal massive organs using radiesthesia procedure. What I found was that all internal organs (Liver, Heart, Spleen, Lungs, and Kidney) were in the lowest level of energy, rated one out of eight [4].

This results was also found in the owner of the cat, that she was also without any energy inside these organs, as I measured weeks before and she was in treatment using homeopathy medications according to the theory of *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine* created by myself in 2015 when I began homeopathy course [5].

In this theory I am using Phosphorus to treat energy deficiency of the Liver, Sulphur to replenish the energy of the Heart, *Calcarea carbonica* to treat the energy deficiency of the Spleen, Silicea to replenish the energy of the Lungs and *Natrum muriaticum* to treat the energy deficiency of the Kidneys [4-6].

Using this kind of therapy, it was possible to reduce the glycemia of the cat to quite a normal value, and reduce the use of insulin as the cat was having hyperglycemia not for the absence of insulin but it was caused by the energy deficiency situation leading to energy imbalances responsible for the hyperglycemia manifestations [4].

In traditional Chinese medicine, diabetes is caused by *Yin* energy deficiency and formation of internal Fire and when I replenish the energy of these organs, it was possible to correct the alterations that was causing the hyperglycemia, in the energy point of view [4,6].

Another interesting case that I want to report in this editorial article is a dog with diagnosis of Lung cancer. I asked his owner to take him to my clinic to measure the energy of the five internal massive organs using radiesthesia procedure. What I found in this dog was that all his internal five massive organs such as Liver, Heart, Spleen, Lungs and Liver were in the lowest level of energy, rated one out of eight. This finding is the same encountered in human patients

with cancer as shown in the article written by myself titled *The Importance of Treating Energy Imbalances and Chakras Replenishment for Prevention and Treatment of Cancer* [7].

It was also advised to the owner to give the homeopathy medications that they were using to replenish the energy of the five internal massive organs of the five elements theory of traditional Chinese medicine to increase the immune system of the dog to fight against the increase multiplication of cancer cells [8].

In another article also written by myself titled *New Global Immunodeficiency*. I am showing the importance to understand that the majority of emotional or physical symptoms presented by the patients nowadays are caused by these energy deficiencies inside the five internal massive organs of the five elements theory of the traditional Chinese medicine as shown in many articles published until today [6,9-15].

So, in this editorial article, I am showing that dogs and cats also have in common, energy deficiency inside the five internal massive organs of the five elements theory of traditional Chinese medicine and these alterations needs to be corrected to prevent and treat the majority of disease formation as the energy of these organs are responsible for many different clinical manifestations in a variety of specialties. According to traditional Chinese medicine, one disease can come from different energy imbalances and one energy imbalances can generate diverse clinical manifestations [9,16-18].

More studies in animals needs to be done in this New Global Immunodeficiency because the same alterations found in humans is affecting the animals in our home and the use of highly diluted medications according to the theory of *Constitutional homeopathy of the Five Elements Based on Traditional Chinese Medicine* to replenish the energy of these organs is of paramount importance to treat the cause of all disease formation and not just the symptoms presented by the animals [5,9].
