Editorial

Why do you think we are here on planet Earth? We are here on Earth to learn. We are light Spirits, which we see as aura, living in dark material bodies. I spent 40 years of my life studying the aura-first photographic aura, then finding better way to measure it. I found that our aura is nonlinear electromagnetic field (NEMF), which is emotionally sensitive [1], and which rules and regulates everything in the body [2]. This allows the functioning of our body to be modulated by our emotions. NEMF is weak informational field-it rules and regulates not with its strength, but with the information it carries.

Thus, we are here on Earth-light spirits living in dark material bodies-to learn to control our emotions, which come with the Spirit, and to learn to control our ego, which comes from the instincts of survival of the material body. Who are the people doing narcotic drugs. I have measured people after smoking marijuana and I have found that their NEMF is very weak, i.e. their aura is very weak. And since the aura is our Spirit, their Spirit is very weak. A light bulb lightens in my head-since the Spirit is the one that is emotional, these people do narcotic drugs because this makes them less emotional.

So, the users of narcotic drugs are escapists. Instead of learning how to control their emotions, they use narcotic drugs to become less emotional. If narcotic drugs reduce the strength of the Spirit that comes from God, they must be evil invention, and they are evil invention. I have an article published [3] about the narcotic drugs opening the door to mental disorders. In the present article, I reveal the connection between the use of narcotic drugs and the Kandinsky-Clerambault syndrome. First, I need to explain what Kandinsky-Clerambault syndrome is and how it connects to narcotic drugs.

Dr. Serebrenikova, Russian renowned psychiatrist, describes it like this. All patients regardless of nationality, religion, education and intellect, sex and age, describe their symptoms in the same way: impose demanded behavior and imposed sickness. She explains it in the following way: "The Syndrome of Kandinsky-Calembault is typical bioenergy phenomenon. It is response reaction to imposed behavior from outside or inside" [4]. I owe you some explanation here. When the Spirit is very weak, because of use of narcotic drugs or other reason, the dark material body is almost empty (my measurements showed that only 20% of the NEMF, called Spirit, is left after the use of marijuana).

I explained in my book: "Listen and Talk to Your Body and Soul" [5] that the people born with dominant negative thinking are the ones to be attracted and become addicted to narcotic drugs or alcohol. This is because these exciting substances bring light to their brains darkened by their dominant negative thinking. If so, the empty of Spirit bodies of the drug-addicted individuals are an invitation for negative Spirits, which feed with negative emotions, to come and inhabit their bodies. This explains the statement of Dr. Serebrenikova of imposed behavior from inside, but a behavior could also be imposed by a negative Spirit from outside.

Dr. Serebrenikova calls bioenergy-cannibalism the act of imposing behavior and diseases on people, called Kandinsky-Clerambault syndrome. Cannibalism is destruction of the material body, while imposing behavior and diseases is destroying the Spirit, and thus the personality, of the individual. So, bioenergy-cannibalism is worse than cannibalism. I am writing this article to let the users of narcotic drugs know that behind the misery of the imposed behavior and the imposed sickness are the narcotic drugs

they use. If they don't like the misery, they should do their best to stop the narcotic drugs, which is only possible if they make the efforts to change their way of thinking from negative to positive.
